Tyrone J. Sgambati

Quantitative User Experience Researcher

(707) 672-9793 • tironesr@berkeley.edu • LinkedIn: tyronejsgambati

SUMMARY OF QUALIFICATIONS

- PhD-trained researcher with 8+ years of applied behavioral and product research experience
- Skilled at survey design, experimentation, psychometrics, and log-data analysis in R, SQL, and Python
- Experience deploying AI tools (agents, APIs, code generation) to optimize research workflows
- Expert at translating findings into strategic recommendations for cross-functional stakeholders

EXPERIENCE

Postdoctoral Scientist, Center for the Science of Psychedelics, UC Berkeley 2025–*Present*

- Own a recurring probability-sample attitude tracker on a sensitive public-health topic, including questionnaire design, sampling strategy, analysis, and executive-facing reporting
- Redesigned sampling, instruments, and vendor strategy, improving rigor and cutting costs by 40%
- Built an AI-assisted workflow using LLMs and human ratings to analyze 2,000 text responses
- Delivered findings via a public report, a policy webinar with RAND, and a federal data expert panel

User Research Consultant, WEST Co. (Tangle app), San Francisco, CA Summer 2024

- Identified five user archetypes via factor analysis to guide feature design for a consumer app
- Built and validated a product-personalization quiz to support user onboarding during beta testing

Quantitative UX Research Intern, Meta Platforms, Menlo Park, CA Summer 2023

- Executed global product research on 10,000+ new users, linking in-product survey data with SQL-queried behavioral logs to compare objective and self-reported engagement
- Partnered with Engineering, PM, and UXR to tailor research for high-priority markets
- Provided recommendations to stakeholders for measuring user-perceived quality on Facebook, based on a review of cross-disciplinary research (Data Science, Engineering, UXR)

Research Associate, Greater Good Science Center, Berkeley, CA 2021–2024

- Led quantitative evaluation of a $750K state initiative, setting metrics and reporting to stakeholders
- Developed and psychometrically validated a novel survey instrument used as a program endpoint
- Identified baseline-dependent program effects, informing program design decisions

Doctoral Researcher, UC Berkeley 2019–2025

- Designed and led 8 survey experiments and longitudinal studies (total $N > 10{,}000$) on attitude change
- Applied regression, t-tests, ANOVA, and mixed-effects models to experimental and longitudinal data

EDUCATION

University of California, Berkeley 2019–2025
Doctor of Philosophy, Social and Personality Psychology | Grad Certificate, Applied Data Science

University of Michigan, Ann Arbor 2015–2019
Bachelor of Science in Philosophy, Cognitive Science, and Psychology

SKILLS

Research Methods: Survey design, A/B testing, experimental design, psychometrics, log-data analysis, longitudinal research, sampling design, response effects, program evaluation

Statistical Methods: Regression, ANOVA, t-tests, multi-level/mixed-effects models, factor analysis, difference-in-differences, sampling weights (IPW, raking), imputation, power analysis

Tools: R, SQL, Python, Qualtrics, AI (agents, APIs, code generation, prompt engineering)
